```
# OSL PRACTICAL 1
# Basic File and Directory Operations in Linux

# 1. Display current working directory
pwd

# Display all files, including hidden files
ls -la

# 2. Create main directory and three subdirectories
cd ~/OSL_Practicals
mkdir -p OS_Lab
cd OS_Lab

mkdir -p Programs Documents Backup

# Display directories
ls
# 3. Create text files
touch file1.txt file2.txt file3.txt

# Write content into files
echo "This is the first file." > file1.txt
echo "This is the second file." > file2.txt
echo "This is the third file." > file3.txt

# Display file contents
cat file1.txt
cat file2.txt
cat file3.txt

# 4. Copy a file
cp file1.txt file1_copy.txt

# Rename a file
mv file2.txt renamed_file.txt

# Move a file into Documents
mv file3.txt Documents/

# Delete a copied file
rm file1_copy.txt

# Display remaining files
ls

# Display Documents directory contents
ls Documents

# 5. Search for a file
find . -name "renamed_file.txt"
# Display detailed file information
stat renamed_file.txt
# Display file size
du -h renamed_file.txt

# Display complete directory structure
ls -lR
```
